Logic in computer science covers the overlap between the field of logic and that of computer science. The topic can essentially be divided into three main areas:

Logic in computer science - Wikipedia

Computational chemistry is a branch of chemistry that uses computer simulation to assist in solving chemical problems. It uses methods of theoretical chemistry, incorporated into efficient computer programs, to calculate the structures and properties of molecules and solids.

JCTN publishes peer-reviewed research papers in all fundamental and applied research aspects of computational and theoretical nanoscience and nanotechnology and general mathematical procedures dealing with chemistry, physics, materials science, engineering, and biology/medicine.

Second, a focus on practices (in the plural) avoids the mistaken impression that there is one distinctive approach common to all science—a single “scientific method” or that uncertainty is a universal attribute of science.

Generally speaking, instrumental scientific discourse assumes the 'facthood' of its representations and judgements—a form of quantitative identity between its concepts and objects in the world (which is why the distinction between numbers as concepts or as objects is an important one), which is to fashion the ratio described above instead ...

Below is a list of OGC Implementation Standards. Implementation Standards are different from the Abstract Specification. They are written for a more technical audience and detail the interface structure between software components.
